TODAY’S AGENDA

(FINAL ITERATION)

Strategic Analysis
We will drive the definition of Hive Learn's unique value proposition, demonstrating how the platform effectively addresses specific user needs

Value proposition Canva
To visualize this strategic alignment, we will outline a Value Proposition Canvas that maps the direct fit between customer pains and gains and the tangible benefits our solution provides.

Platform Enhancements
We have upgraded the platform with a dedicated Mentor Interface to empower guidance, a robust course evaluation system to ensure quality, and new features specifically designed to break down organizational silos and foster collaboration.

Iteration Review & Feedback Integration
We have summarized the progress from the first iteration and highlighted how we actively refined and improved our work by incorporating specific feedback

HiveLearn
Knowledge Hive

A UNIFIED PLATFORM THAT ACCELERATES GROWTH FOR COMPANIES AND EMPLOYEES

A single system that maps skills, identifies gaps, and guides growth across the organization

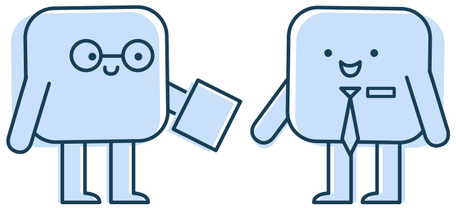

Our value proposition focuses on creating measurable growth for employees and companies.

TURNING POTENTIAL INTO PERFORMANCE

This framework shows exactly how our solution transforms real challenges into measurable growth.

HiveLearn
Knowledge Hive

GAIN CREATORS

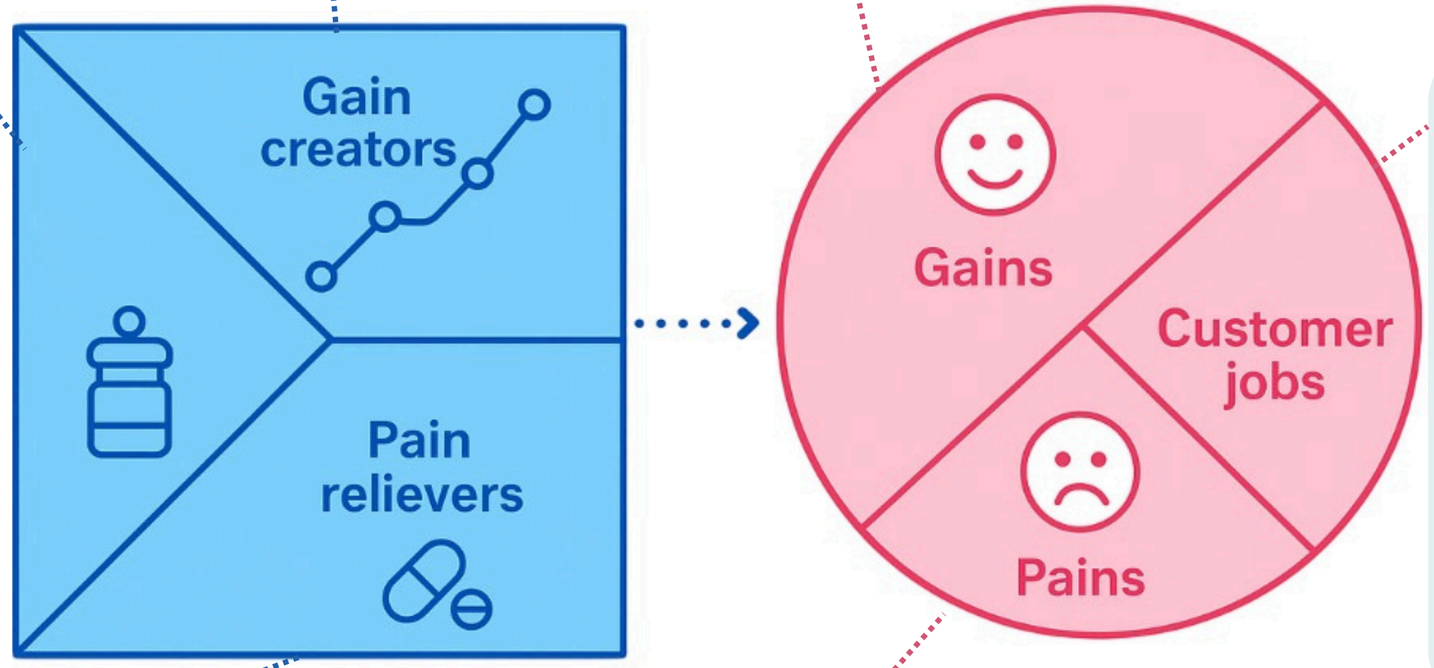

- Personalized career pathways
- Smart skill recommendations
- Faster talent development
- Improved team performance visibility

GAINS

- Clear career pathways for employees
- Stronger team performance and alignment
- Higher retention and motivation
- Better, data-driven workforce decisions
- Access to fresh knowledge and emerging talent

PRODUCTS AND SERVICES

- Skill gaps clearly identified
- Real-time skill validation
- Smarter project & resource allocation
- Structured 1:1 coaching support
- Reduced training waste through ROI insights
- Early detection of retention risks

CUSTOMER JOBS

- Develop and grow employee skills
- Plan career paths and internal mobility
- Allocate people to projects effectively
- Monitor team performance and skill gaps
- Recruit and identify future talent

PAIN RELIEVERS

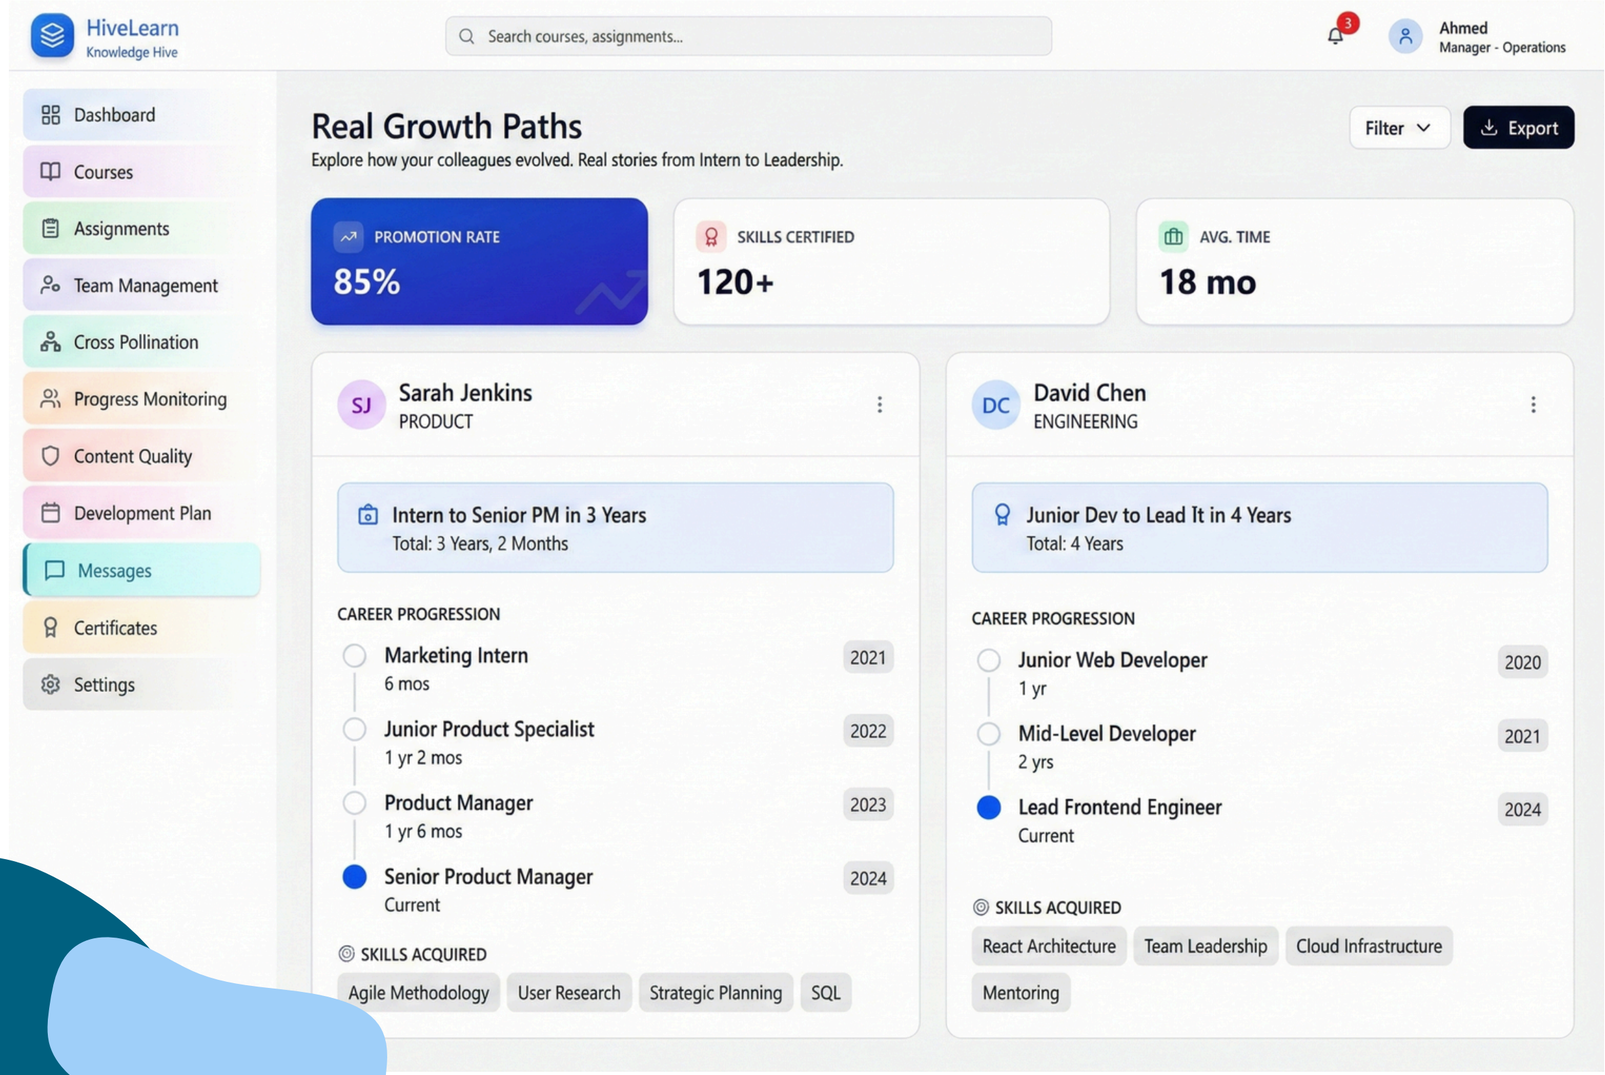

- Clear identification of skill gaps and feedback
- Smarter project and resource allocation
- Early detection of disengagement and retention risks

PAINS

- Lack of visibility on skills & gaps
- Unstructured career growth for employees
- Inefficient or biased talent allocation
- Low engagement and unclear development paths
- Training investments with unclear ROI

HiveLearn
Knowledge Hive

EMPLOYEE JOURNEYS

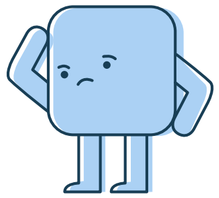

A dedicated section of the app showcasing **real employee growth paths** within the company.

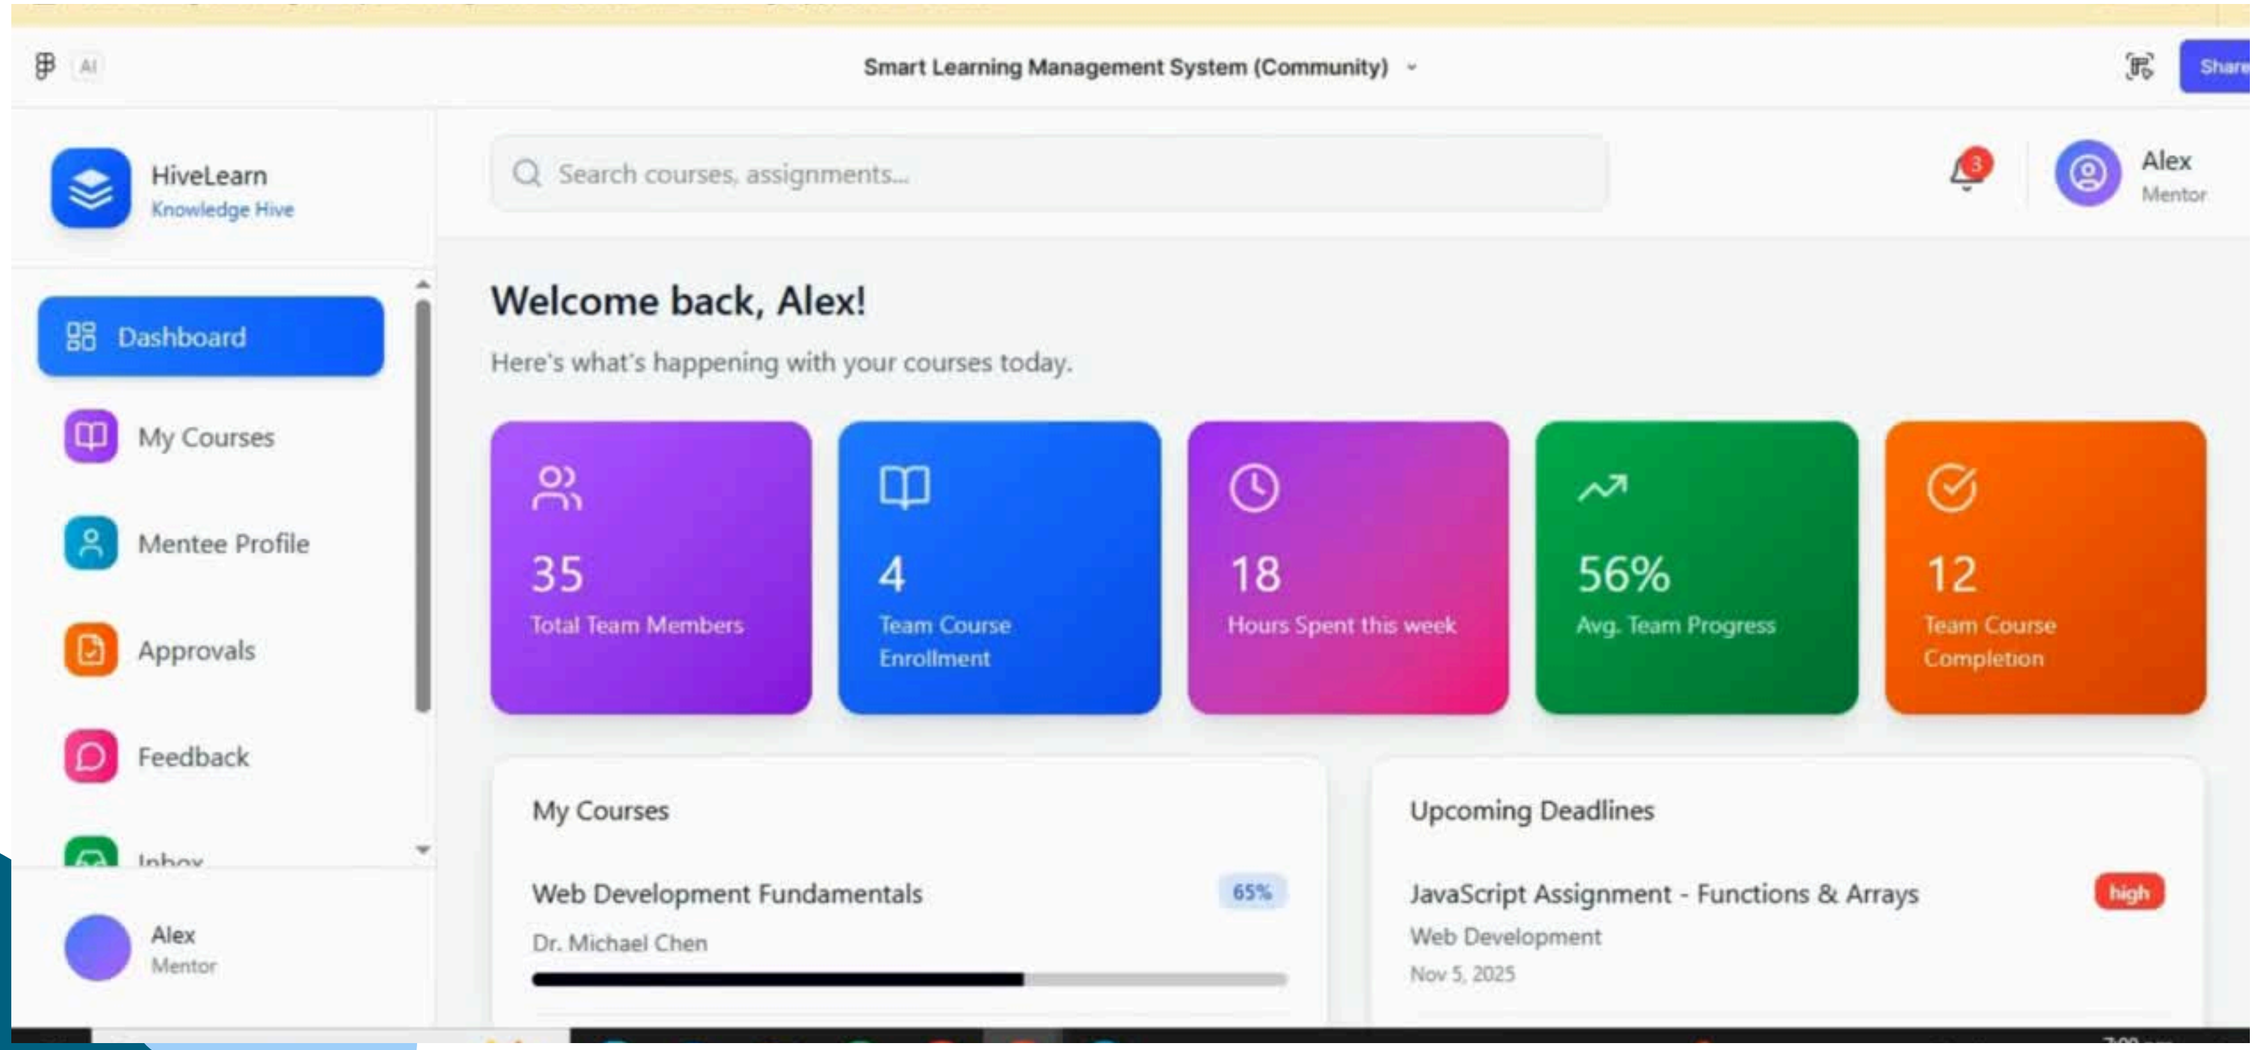

Shows the career paths of users who have progressed through the platform, highlighting skills acquired, role changes, and key achievements.

The value of this section is to inspire new employees by showing how they can progress in their career by following the example of those who have made it.

HiveLearn

MENTOR INTERFACE

HiveLearn
Knowledge Hive

ACTIVE QUALITY ASSURANCE LOOP

HiveLearn relies on Peer-to-Peer content, so ensuring quality is challenging
We tried to solve this issue with a **Traffic Light Protocol**:

***High Impact*:** the content has high retention and positive feedback.

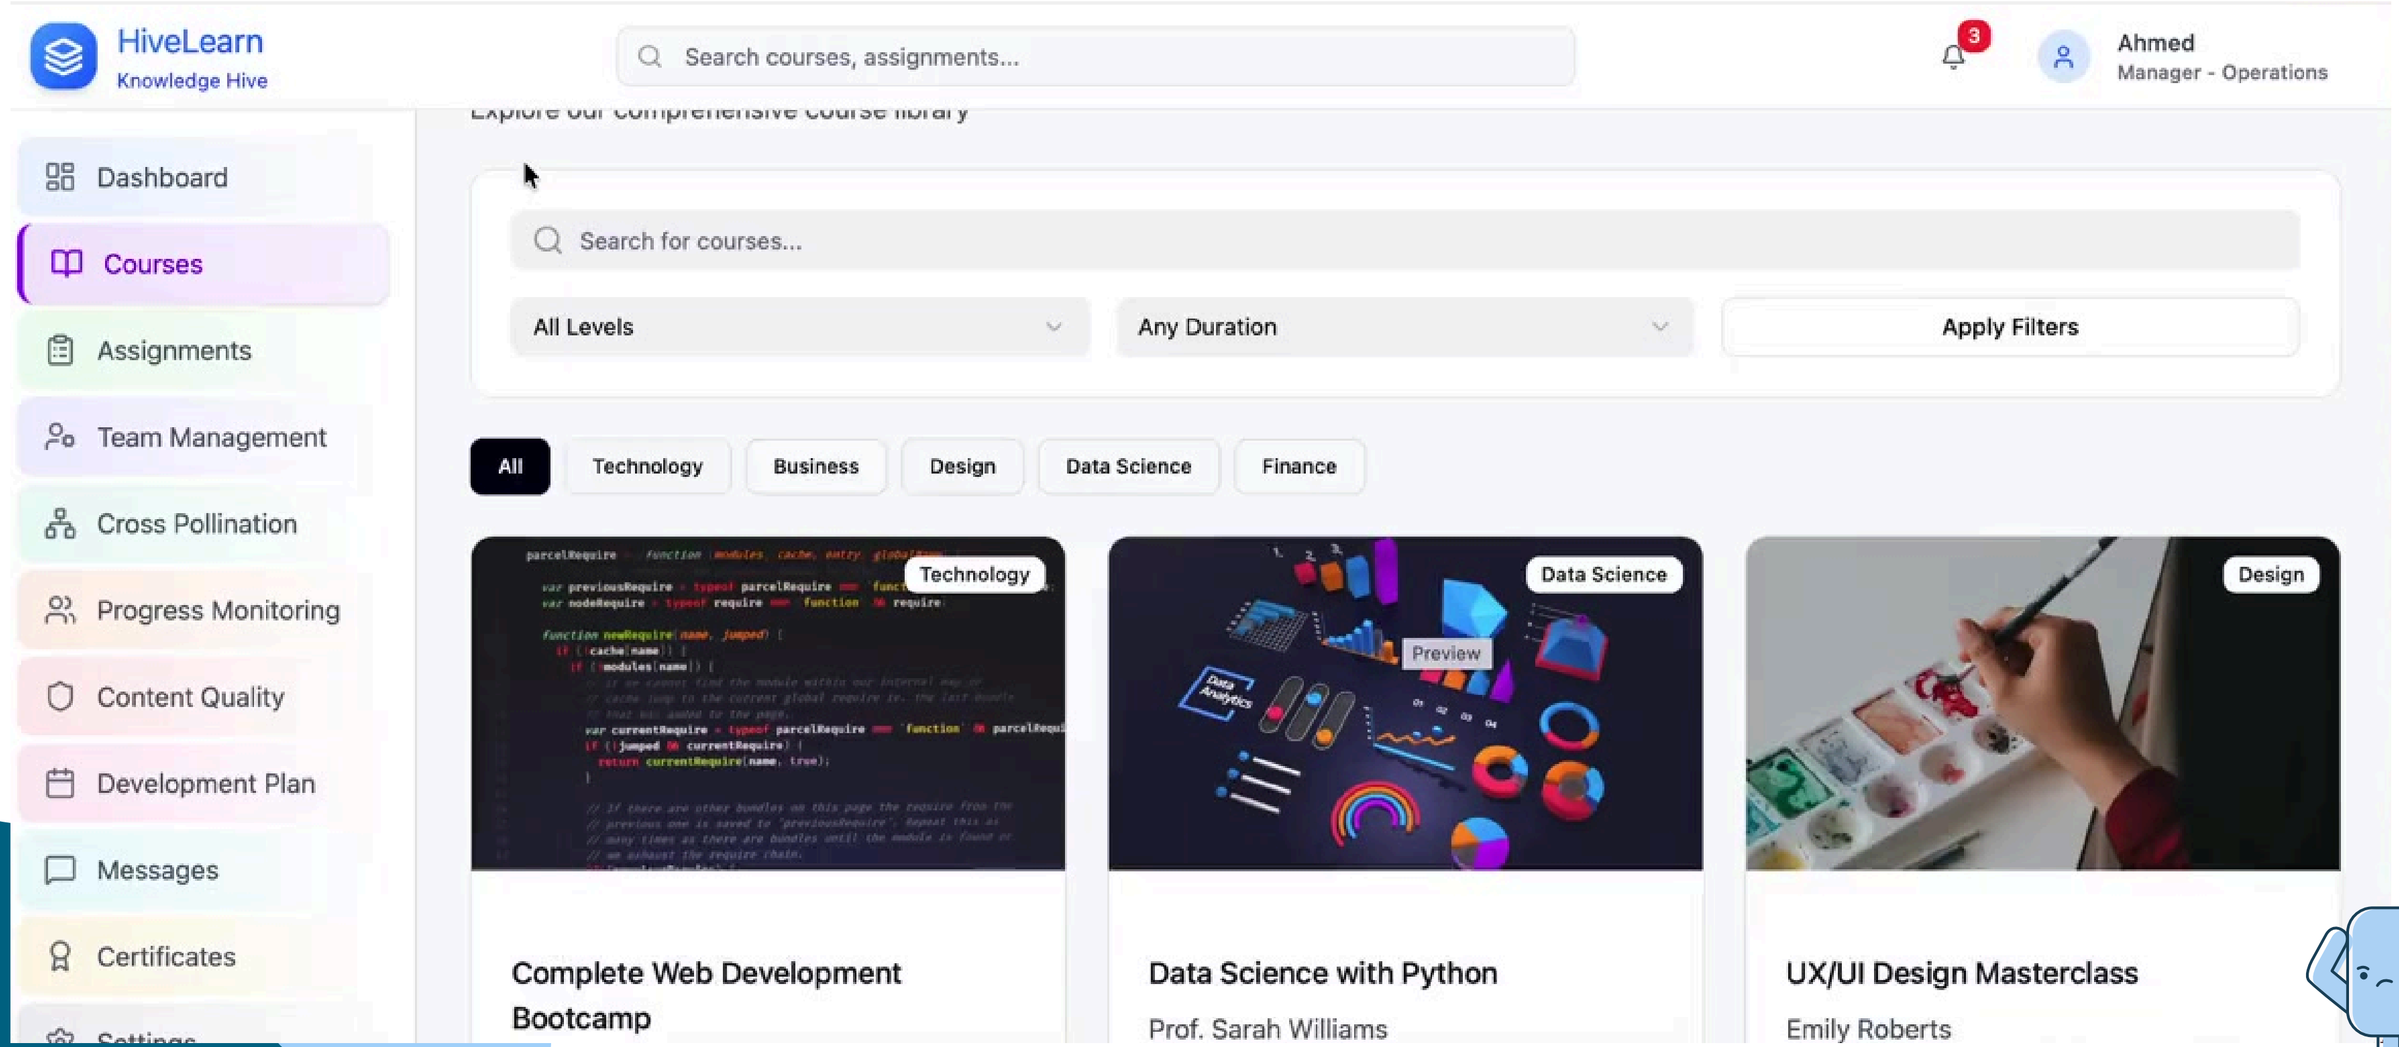

***Optimization Needed*:** if the system detects a 'drop-off rate', it flags the content as Yellow. It sends proactive, constructive suggestions.

Critical Review: if content becomes obsolete or abandonment is too high, it turns Red. The course is temporarily frozen until the Mentor or Manager updates it.

*This transforms the platform into a **double-learning engine:** employees learn new skills, and mentors learn how to become better communicators and leaders through this continuous feedback loop.*

HiveLearn
Knowledge Hive

ACTIVE QUALITY ASSURANCE LOOP

HiveLearn
Knowledge Hive

CROSS POLLINATION

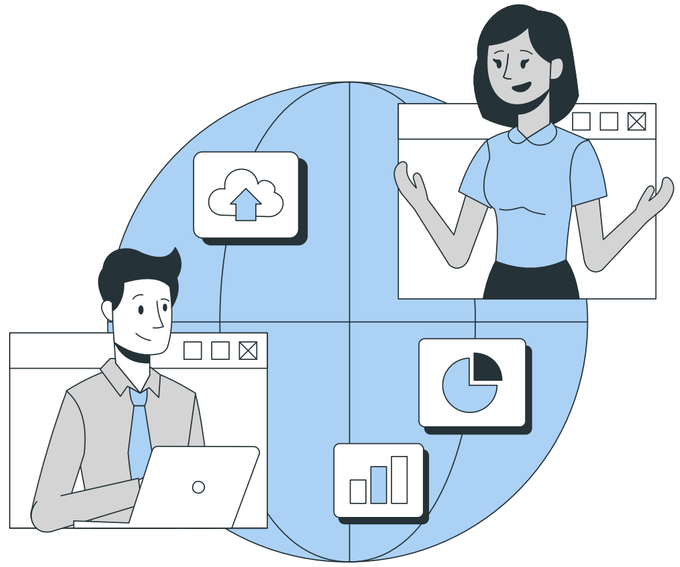

Most companies suffer from the ***Silo Effect***: departments work in isolation, leading to miscommunication and missed opportunities.

The platform pairs employees from disconnected functions and it involves structured 'Job Shadowing' modules.

The result is powerful:

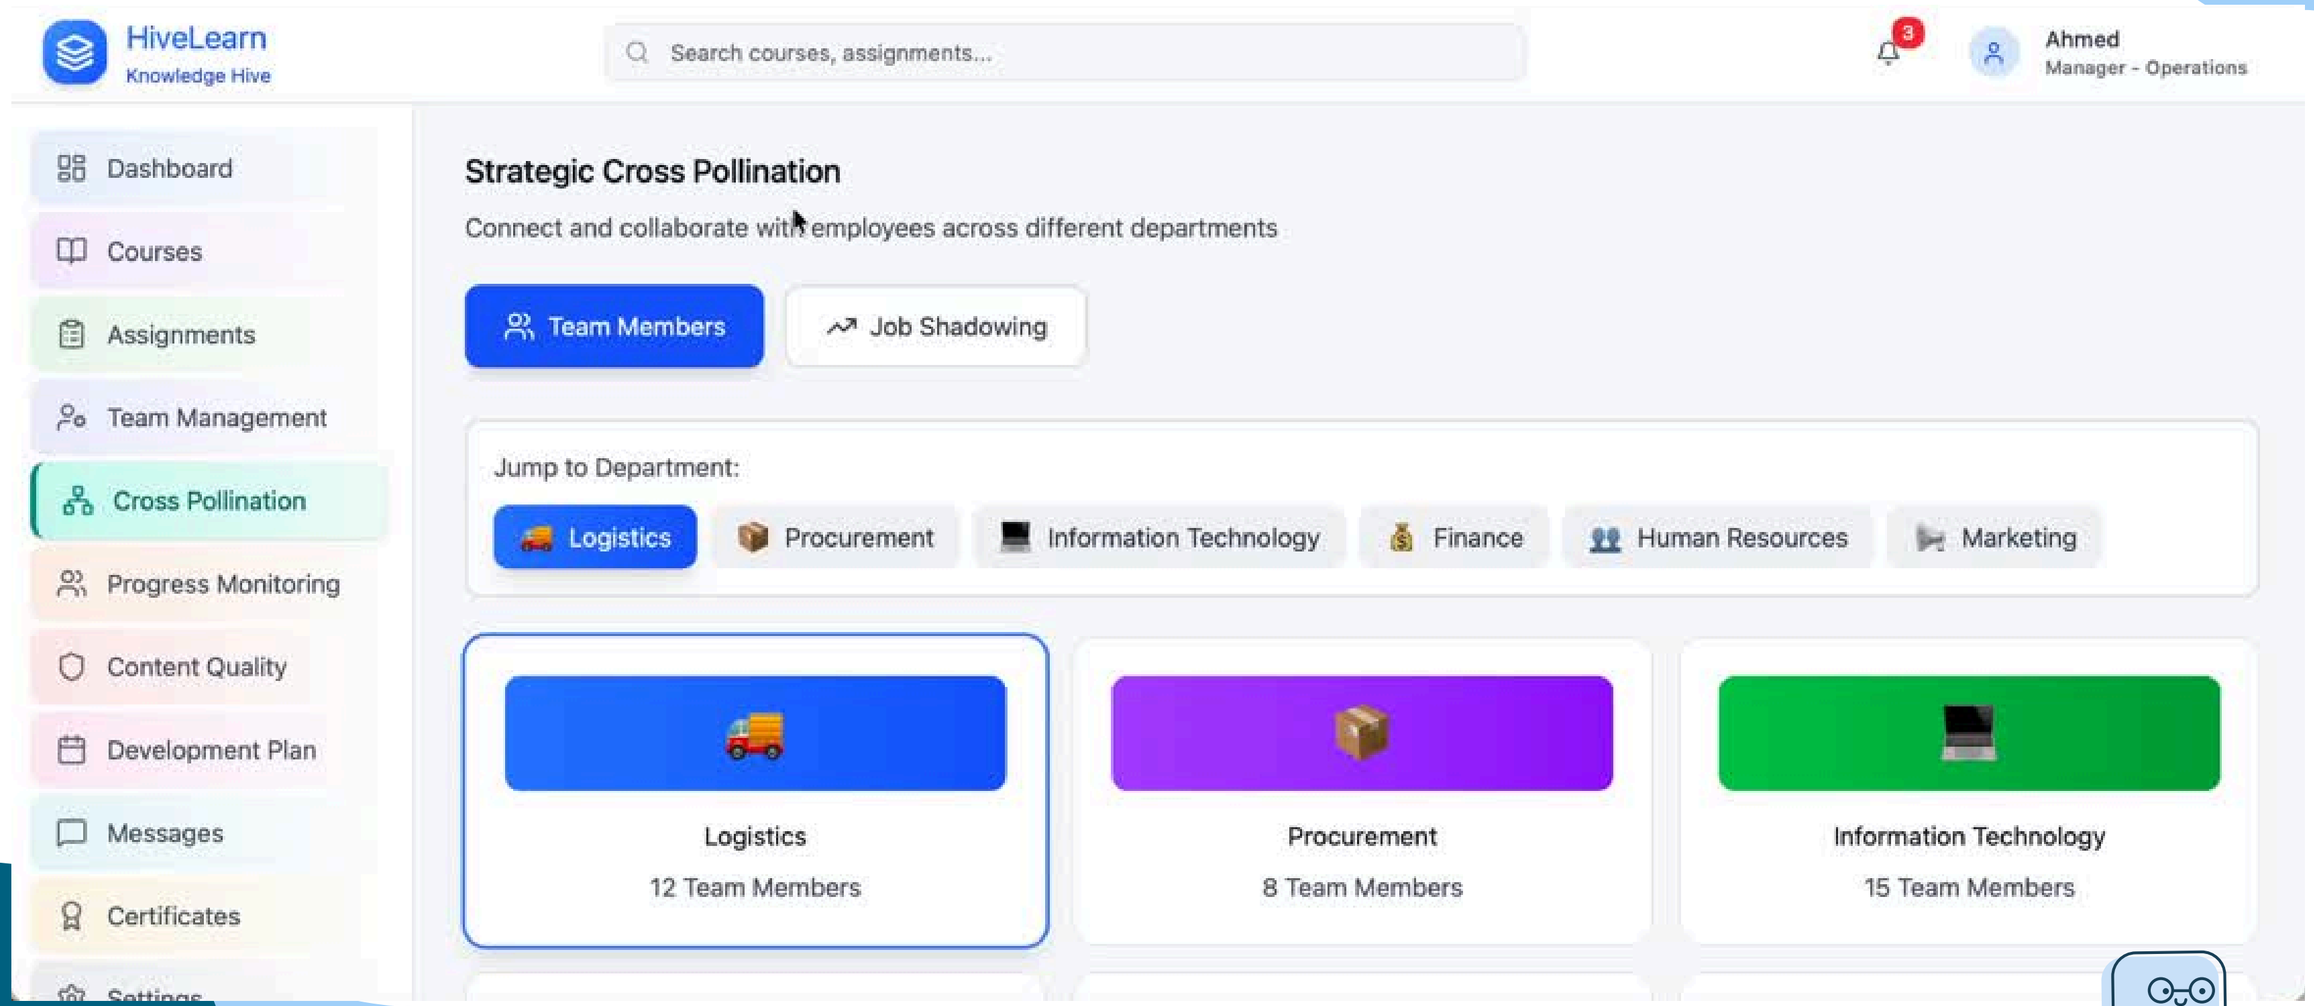

1. It builds **empathy**
2. It accelerates **innovation**
3. It creates a **holistic view**

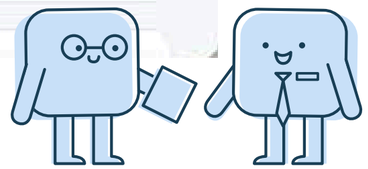

HiveLearn effectively becomes the nervous system of the company, connecting isolated parts into a coherent, agile whole.

HiveLearn

OUR PATH

We leveraged feedback from every iteration to continuously refine our content and methodology

FIRST ITERATION

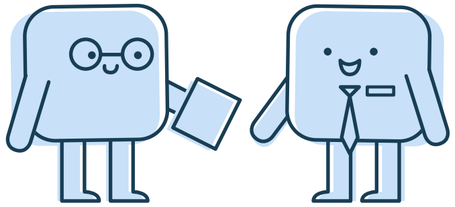

- THE CONCEPT
- STAKEHOLDER MAP
- IN SCOPE AND OUT OF SCOPE ANALYSIS
- USER STORIES
- PROTOTYPE IDEA

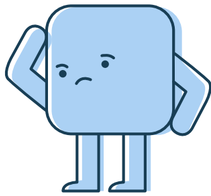

SECOND ITERATION

- FOCUS ON MANAGERS AND EMPLOYEES USER STORIES
- MENTEE'S INTERFACE
- FOCUS ON METHODOLOGY

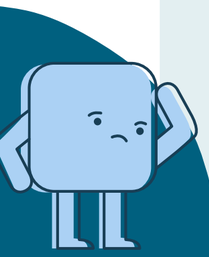

THIRD ITERATION

- INTERNAL ROLL-OUT AND ADOPTION PLAN
- EMPLOYEES' SURVEY
- MANAGER INTERFACE
- BUDGET ESTIMATION

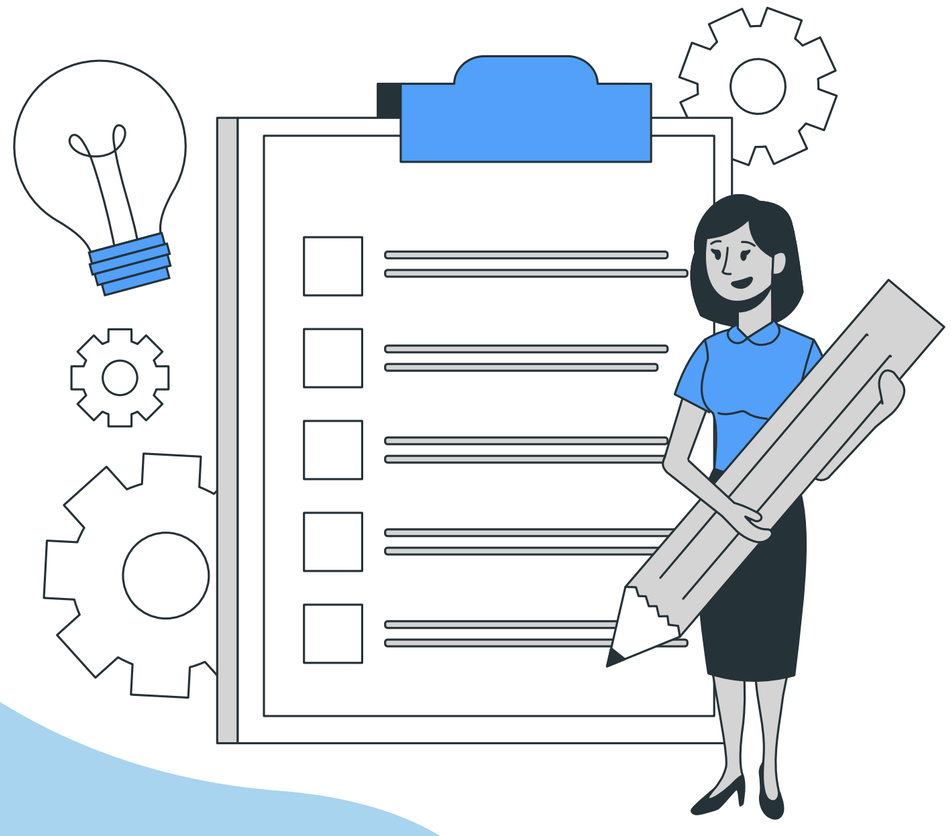

BEFORE *The initial state*	THE CATALYST *Why change?*	AFTER *Optimized state*
Generic User Stories: Requirements were vague and not tied to specific personas or needs	**Need for User-Centricity**: We realized the critical importance of focusing strictly on the final user to ensure product-market fit	**Specific User Stories**: Detailed, persona-based requirements that address exact pain points and usage scenarios
Generic Out of Scope: Project boundaries were blurry, leading to ambiguity about what not to build	**Lack of Definition**: The project scope was not clearly outlined, creating a risk of "scope creep" and lack of direction	**Specific Out of Scope**: Clearly defined boundaries and constraints to keep the team focused on core deliverables
Limited Prototype: The initial design focused on only one specific type of user, ignoring others	**Unmet Requirements**: The limited prototype failed to satisfy the full range of user stories and scenarios required	**Inclusive Prototype**: A comprehensive prototype designed for "everyone" (all target demographics/roles)
Non-Agile Methodology: Work processes were unstructured or rigid, leading to inefficiencies	**Efficiency & Time Management**: To avoid wasting time on low-value tasks and to speed up iteration cycles	**Agile & Organized**: Structured division of work with clear roles and iterative delivery

METHODOLOGY:
HYBRID AGILE TRANSFORMATION

INITIAL APPROACH:

- Traditional, Consensus-Based Model (***"Design by Committee"***).
- Relied on **exhaustive, infrequent in-person sessions** for all decisions.
- Resulted in significant bottlenecks and inefficient use of time.

THE PIVOT TO AGILE:

- **Strategic Delegation:** Mapped individual strengths to specific project pillars and transitioned from collective execution to trusted delegation.
- **Scrum-Inspired Cadence:** Replaced long meetings with rapid, focused check-ins (2-3 days) to track progress and identify blockers in real-time.
- **Continuous Review:** Implemented an iterative feedback mechanism throughout the cycle, preventing last-minute revisions.

HiveLearn
Knowledge Hive

METHODOLOGY:
HYBRID AGILE TRANSFORMATION

HiveLearn
Knowledge Hive

FINAL METHODOLOGY: SCRUMBAN (HYBRID AGILE)

- **Leveraged the Best of Both:**
  - ***Scrum Structure:*** Defined roles and regular check-ins.
  - ***Kanban Flow:*** Flexibility and continuous review mechanisms.
- **Goal**: Maximized Adaptability and Efficiency.
